Summary

Backend engineer building high-throughput payment services with Java and Spring Boot.

Work Experience

Software Engineer II, FinPay Technologies - Jan 2023 - Present
- Built REST APIs in Java 17 and Spring Boot serving 2M requests/day with p99 latency under 120ms.
- Migrated a monolith to 6 microservices communicating over Kafka, reducing deployment time by 70%.
- Introduced Redis caching for merchant lookups, cutting database load by 40%.
- Mentored 3 interns and led code reviews; wrote JUnit tests raising coverage from 45% to 80%.

Software Engineer, ShopKart - Jul 2021 - Dec 2022
- Developed order-management services on PostgreSQL and deployed them with Docker on AWS EC2.
- Automated release pipeline with Jenkins, saving 6 hours per week of manual work.
- Optimized slow SQL queries, improving checkout page load time by 35%.

Projects

URL Shortener - Spring Boot, Redis, Docker. Handles 5k requests per second in load tests.

Education

B.Tech in Computer Science, VIT Vellore, 2017 - 2021

Skills

Java, Spring Boot, PostgreSQL, MySQL, Kafka, Redis, Docker, AWS, Git, JUnit, Data Structures, Algorithms
